A high-altitude mountain landscape with snow-covered peaks and a group of people in the foreground. The scene is captured in a cinematic style with a deep blue sky and bright sunlight. The mountains are rugged and covered in snow, with some rocky outcrops visible. In the foreground, a group of people in winter gear are standing on a snow-covered slope, looking towards the mountains. The overall mood is one of adventure and exploration.

# GEOTECH TECHNICAL FABRICS

## WATERPROOFING AND BREATHABILITY

Your functional outerwear needs to make a little magic. It needs to be breathable and at the same time, waterproof. The heat and moisture generated by your body as you ski or snowboard should be able to escape. At the same time, the moisture on the outside of your outerwear needs to be kept out.

How waterproof and breathable outerwear is, is expressed in two numbers. The first is in millimeters (mm) and is a measure of how waterproof a fabric is. In the case of a 10K or 10.000mm fabric this means you can place a square tube with inner dimensions of 30mm x 30mm over the outer fabric and you could fill it with water to a height of 10.000mm before water would begin to seep through. The higher this number, the more waterproof the fabric. 5000mm is low waterproofing, 10.000mm is average and 20.000mm is high.

The second number is a measure of how breathable the fabric is, and is measured in grams (g) of water vapor, which can pass through a square meter of the fabric from the inside to the outside in a 24-hour period. In the case of a 20K (20.000g) fabric, this would be 20.000 grams. The larger the number, the more breathable the fabric, meaning that 5.000g is low and 20.000g is very breathable.

## SOFTSHELL

What is a softshell? It's comfortable, flexible, wind and water-resistant. The fabric is made out of three layers. The outer layer is water-repellent and stretchy. The middle layer is both water and wind resistant as well as being breathable. The inner layer that is closest to the body is brushed providing soft and comfortable insulation. The big difference between hard shell and softshell outerwear is the breathability. Softshell is extremely breathable, making it perfect for physical activity.

## INSIDE

### METHODS IN INSULATION TECHNOLOGY

- 3M Thinsulate featherless loose-fill insulation, unique high-loft microfibers, breathable, water-resistant, quick drying and durable ensuring a high-end comfortable insulation for all conditions.
- Feathertouch insulation, a high-loft insulator providing in-depth warmth by high-volume structure capturing air in small pockets.
- High-loft Thermax insulation, a premium insulator combining high mobility with volume and low weight ensuring comfortable warmth under all conditions.
- Thermax insulation, a regular high-end insulator combining high mobility with low weight ensuring comfortable warmth at all times.

### SEALED SEAMS

Rather than just stitched together, seams can also be taped on the inside. Taped seams are where tape is applied to a garments seam and sealed using heat. For outerwear to be highly waterproof the seams need to be treated in this way. This will stop water coming through the stitching. Critically taped seams are when the most important seams have been taped which tends to be the hood, neck and shoulders in jackets and the waist and knees in trousers.
