

# AUTUMN WINTER 2026/2027

**SILVINI**<sup>®</sup>

TECHNICAL  
SPORTSWEAR

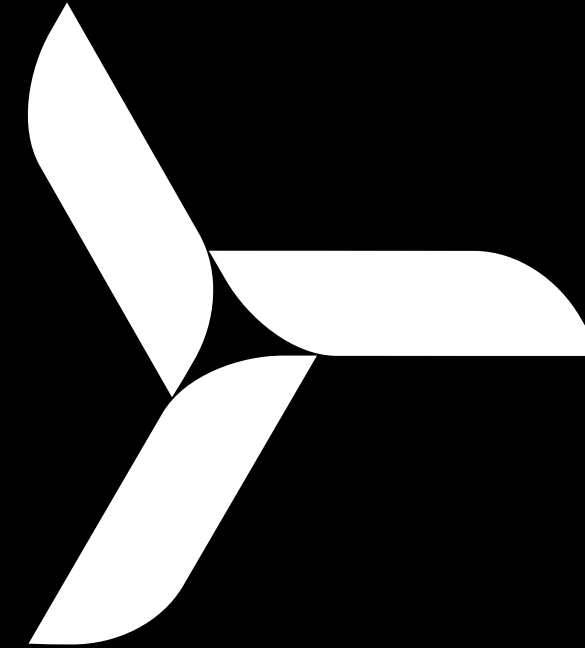

# PERFORMANCE, DESIGN, FREEDOM TO MOVE

We design and manufacture technical sportswear for cross-country skiing, ski touring, and cycling adventures — functional products that combine performance, comfort, and style.

Our winter collection celebrates freedom in motion — from high-intensity training to a calm ski outing in the backcountry. It supports you in every moment, no matter how challenging the conditions.

For cyclists who don't hang up their bikes when the days get shorter and the temperatures drop, our technical sportswear ensures warmth, comfort, and performance.

Our philosophy is simple. High-quality gear should never limit an athlete, it should help them perform at their best, in any weather and on every kilometre. That's why we focus on development, testing, and innovation. We work closely with professional athletes as well as passionate amateurs to perfect every detail.

It all began in 2009, when four friends – Jessie, Dušan, Jan, and Claudio – combined their experience, ideas, and shared passion for sport. Coming from different parts of the world, they brought together unique perspectives on design, technology, and functionality, giving rise to SILVINI. The Czech brand with the heart of Europe, built on precision, innovation, and the courage to do things differently.

Today, SILVINI is synonymous with an active lifestyle. For those who love to move, push their limits, and feel great both in motion and in life.

KEEP CALM, XC SKIING ON

## FOR MAXIMUM PERFORMANCE AND ADVENTURE

The right clothing is essential for successful cross-country skiing. It requires functional materials that are breathable, lightweight, and wind-resistant. In our XC SKIING collection, we prioritize tried-and-tested fabrics such as Softshell Light and Quatroflex Shell, which are used throughout the entire range. These materials offer excellent protection against harsh weather while their anatomically shaped design ensures freedom of movement, enhancing both your comfort and performance on the skis.

SPOTTED BY MOUNTAINS

## WINTER SILENCE AND PEACE. JUST YOU AND THE MOUNTAINS...

...and the weather, which can change in an instant. Snow, frost or sunny weather. Whether it's extreme cold or unexpected snowfall, our Ski Touring products will ensure you comfort and protection, with an emphasis on breathability, resistance to harsh weather and freedom of movement. Weight and compactness are key factors to meet all demanding challenges. We solved these complex tasks in cooperation with top textile manufacturers who have extensive experience in the field of material development with focus on extreme conditions and ecology. Our SASSOLUNGO jacket and FISCALINO vest use a combination of Pertex® Quantum NetPlus® and PrimaLoft® Active Evolve recycled materials.

THE COLORS AND SCENTS OF AUTUMN  
FROM THE SADDLE OF A BIKE

ENJOY YOUR  
CYCLING  
ADVENTURE TO  
THE FULLEST

The autumn cycling collection is based on reliable products that should not be missing in your equipment. Thanks to them, you don't have to worry about unpredictable weather and you can go for a ride with the confidence that you will stay dry and warm throughout the day. Be the master of the situation and take advantage of all the possibilities that our autumn collection offers you.

LOVE FOR  
DETAIL

# MATERIALS

Very strong material excellent in its resistance to abrasion. It is a two-layer material that substitutes real leather. Brushed synthetic leather is breathable and treated by sanding technology. Surface is brushed which ensures soft and pleasant look.

Light, quick-drying material, which thanks to its porous texture, wicks away sweat perfectly. It is a mesh material that is pleasant to the touch and also does not absorb water.

It is a synthetic filling material made of hollow fiber, which is very easy to maintain and has good heat-insulating properties. The material is very soft and light.

Very strong and durable woven material. It is waterproof and keeps its shape, has good thermal insulation properties. This fabric is known for its durability even when exposed to wear and tear.

Insulated material with combed inner side, effective for thermal insulation and improvement of body thermoregulation. It is a light fabric that wicks away moisture from the body, has great thermal conductivity and adaptability in movement.

Insulated material with combed inner side, effective for sweat drainage and thermal insulation. It has high thermal calorific value and adaptability in movement.

Durable three-layer material with membrane with parameters: Water column: 20,000 mm, Breathability: 20,000 g/m²/24h. It is suitable for extreme windy and rainy conditions even during active movement thanks to its excellent breathability. At the same time, the membrane protects the user against the penetration of wind into the lower layers of clothing and thus prevents from unwanted heat leakage.

It is a synthetic warm lining with the properties of Primaloft®. It's advantages are extreme thermal insulation properties and excellent breathability. Compared to other synthetic fibers, it is characterized by great lightness, softness and compressibility.

It is a synthetic filling material that is very easy to maintain. It's advantage is extreme heat-insulating properties. Compared to other synthetic fibers, Primaloft® repels water and is characterized by great lightness, softness, compressibility and the ability to return to its original shape. Primaloft® Gold ensures the highest possible insulation and thermoregulation.

It is a synthetic filling material that is very easy to maintain. It's advantage are very good heat-insulating properties. Compared to other synthetic fibers, Primaloft® repels water and is characterized by great lightness, softness, compressibility and the ability to return to its original shape.

Elastic three-layer material with membrane and parameters: Water column: 10,000 mm, Breathability: 20,000 g/m²/24h. It is suitable for windy and rainy conditions even during active movement thanks to its excellent elasticity. At the same time, the membrane protects the user against the penetration of wind into the lower layers of clothing and thus prevents from unwanted heat leakage.

Elastic three-layer material with a membrane with parameters: Water column: 10,000 mm, Breathability: 10,000 g/m²/24h. It is suitable for rainy conditions, at the same time it protects the user against the penetration of wind into the lower layers of clothing and thus prevents from unwanted heat leakage.

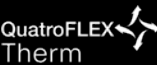

Elastic three-layer material with a membrane with parameters: Water column: 10,000 mm, Breathability: 15,000 g/m²/24h. It is suitable for wind and rain even during more active movement thanks to good breathability. At the same time, the membrane protects the user against the penetration of wind into the lower layers of clothing and thus prevents from unwanted heat leakage.

Four-way densely woven, elastic material, partly water-resistant, which adapts to the figure and allows freedom of movement. It excels in its good breathability and retainability to its shape. It is wind resistant, which prevents from unwanted heat leakages.

Four-way densely woven, elastic material, partly water-resistant, which adapts to the figure and allows freedom of movement. It excels in its good breathability and retainability to its shape. It is wind resistant, which prevents from unwanted heat leakages.

Light, four-way elastic material that adapts to the figure and allows freedom of movement. It excels in its excellent breathability and retainability to its shape, it has good thermal insulation properties. The material does not have a combed inner side and is soft to the touch.

Elastic three-layer windproof material made of light fabric which adapts to the figure. It is slightly water-repellent and thus protects the user against the penetration of wind into the lower layers of clothing and thus prevents from unwanted heat leakage.

Lightweight, quick-drying, woven material with high breathability that flows down the body. The material is very strong, but at the same time thin and has a long lifespan.

Woven, quick-drying material with high breathability that allows freedom of movement. The material is very strong, but at the same time flexible and has a long lifespan.

Woven, quick-drying material with high breathability that prevents from wind penetration into the lower layers of clothing and thus prevents from unwanted heat leakage. The material is very strong, but at the same time light and has a long lifespan.

A world-famous Japanese brand of zippers of the highest quality and perfect workmanship. The zippers do not get stuck and have a long lifespan.

# SILVINI CREW
